Technology Overview

- Flutter with Dart Language for Mobile App
- Laravel for Admin Panel & API
- MySQL for Database

Please follow the below steps to set up the project on your server.

(We have provided the steps to set up using Visual Studio Code Editor. You can use other editors also. Steps may vary based on your editor.)

- 1. Set up Prerequisites (If not available)
 - a. Install Visual Studio Code (VSCode) from this link
 - b. Install Composer from this link with the latest version. (Minimum version 2.6.6)
 - c. Install PHP(XAMPP) from this link with the latest version. (Minimum version 8.0.3)
 - d. Install Laravel from this link (Minimum version 9 -10)
 - e. Install and set up Flutter from this link (Minimum version 3.0.0)
 - f. Install MySQL from this link

(You can choose the MySQL edition based on your needs)

- g. Install MySQL Workbench from this link (This is optional)
- 2. Install and set up the Database on your server. (Technology MySQL)
- 3. Build and host the API & Admin Panel on your server. (Technology Laravel)
- 4. Build and Publish Customer App (Technology Flutter)
- 5. Build and Publish Partner App (Technology Flutter)
- 6. Third-Party Integrations
 - a. Agora
 - i. Keep your Agora account ready. (You can create if not available)

- ii. After Setting up your project in the Agora console you need to add the details in the Admin Panel.
- iii. Agora key, secret, Agora App Certificate, and Agora appID are in the Admin Panel's General Setting menu.
